What will people see and learn about at your home?

- Air Source Heat Pump
- Electric Water Tank
- Solar Power System

What are the main things people will see at your home?

- Air Source Heat Pump
- Electric Water Tank
- Solar Power System

Are there main items that they can't see?

- Insulation

Edmonton, Alberta

Eco-Solar Home Tour -2018

Strathearn NZE Home

Why is this home on the tour?

My wife and I have been going on the Eco Solar Tour for years and now get the chance to give back. In 2015 we finished our dream home, a net-zero house built by Habitat Studio. This house features a mother-in-law suite and still incorporates all the cutting-edge technology to make it a truly energy efficient home. We were motivated to build a home that would meet the needs of our family and also lessen our impact on the environment in building a larger home. This house is a unique example of providing multi-generational living space with modern environmental technology to reduce our energy consumption.

What features save on energy costs?

- 27 Solar panels
- High Efficient Air Source Heat Pump
- Super Well Insulated

What features save on water costs?

- Low Flow Faucets
- Low Flush Toilets
- Rain barrel Water Capture and Storage

Are there any other special features you want to highlight?

- Passive Solar Energy through window design
- Sustainable cork flooring
